Lurking in the Lettuce...

The larvae of this species occasionally damages garden vegetables, including lettuce.

However, as adults, they feed on the nectar of many differing flowers, making them ***important pollinators!***

Pollinators - like moths - fly from plant to plant carrying pollen, which helps plants reproduce. More than 180,000 plant species and 1,200 crops, like many fruits, vegetables, and nuts, rely on the work of pollinators. Check out the **Westmoreland Pollinator Partners on Facebook** for more information on how you can protect pollinators!
