

# 2014 J. Roy Houston Conservation Partnership Award

## Adam Eidemiller, Inc.

Over the past 90 years, Adam Eidemiller, Inc. has been a major force in large-scale regional projects that involve moving earth and managing stormwater – from farming to coal mining; highway construction to commercial and residential development.

Among other projects, Adam Eidemiller, Inc. developed Westmoreland Mall and built substantial sections of the Pennsylvania Turnpike.

And through it all, this family-owned company has been a model conservation partner, embracing the conservation ethic, following best management practices such as sediment ponds to control erosion on its work sites and incorporating state-of-the-art measures such as rain gardens to manage stormwater.

In addition to all that Adam Eidemiller, Inc. has done for the conservation of our natural resources in its own projects, the company also has partnered directly with the District to put conservation projects on the ground throughout our county, such as the conversion of an

unused tennis court at Valley High School into an infiltration parking lot along Little Pucketa Creek in New Kensington.

They also have been generously supportive of the District's operations and needs, providing in-kind services during the construction of the J. Roy Houston Conservation Center barn (all the excavation work and access to heavy equipment),

during the expansion of our campus (excavation and stone for the link to the Public Works building), and during the rehabilitation of GreenForge (excavation work and providing asphalt and paving).

The company also has been a major sponsor of our banquet and of our Envirothon competition, and has advertised in our *Landmarks* newsletter/magazine since 1990.
