Donna M Hughes

Camo Caterpillar

Though green to blend in with leaves in adulthood, the larval stage is even more impressive.

The larvae stack plant fragments, usually flower petals, to disguise themselves as they feed.

Pollinators - like moths - fly from plant to plant carrying pollen, which helps plants reproduce. More than 180,000 plant species and 1,200 crops, like many fruits, vegetables, and nuts, rely on the work of pollinators. Check out the **Westmoreland Pollinator Partners on Facebook** for more information on how you can protect pollinators!
